

# CANINE INFLUENZA PROTOCOL

Always remove animals, food and water dishes, bedding and toys from the area before implementing the cleaning protocol.

## IMPORTANT!

1. Isolate sick dogs
2. Increase cross ventilation (open windows and use fans to move the air through and out of the building)

## Pre-Clean the Area with Kennel Care Enzymatic Cleaner & Drain Maintainer

1. Remove all solid waste
2. Using a dedicated foam gun, pour full strength **Kennel Care Enzymatic Floor Cleaning** into foam gun reservoir tank. Select and insert 4-ounce per gallon (Orange) dilution tip (see foam gun use instructions)
3. Start at the top of the cage or run and work down and out covering the entire surface.
4. Agitate surface to remove soil buildup.
5. Allow the solution to stand for a 3 to 5 minutes.
6. Rinse or squeegee solution towards the drain.
7. Allow surfaces to dry thoroughly before proceeding to next step

## Sanitize all surfaces (Touchpoints) using Animal Facility Disinfectant

1. Mix 1-ounce of **Animal Facility Disinfectant** per gallon of water in a garden/chemical style pump up sprayer
2. Spray all animal and human touchpoint surfaces (floors, walls, gate handles, etc.).
3. DO NOT RINSE – Solution requires a 10-minute contact time
4. Allow all surfaces to thoroughly dry before returning animals, dishes, bedding and toys to the area.

## Additional safety steps and precautions

1. Wash hands before and after handling each animal, after coming into contact with animal saliva, urine, feces, or blood and after cleaning cages.
2. Wear Personal Protective Equipment including a barrier gown of your clothes and gloves when handling sick animals or cleaning cages. Discard before working with another animal.
3. Bring a clean change of clothes to wear home at the end of the day.
4. Thoroughly clean clothes and disinfect shoes worn at the animal facility and at the end of each shift.
5. Do not eat in the animal care treatment or containment area.
